

SynMed® ULTRA now installed in the US

Whether 30 patients on adherence packaging, or hundreds, SynMed® has a solution for you.

(Montreal, Canada; May 1st 2018) Synergy Medical has been designing, manufacturing, installing, and supporting blister pack automation for over 10 years. Firmly established as the market leader in North America, Synergy Medical now has over 350 SynMed® installations.

This past summer, after 3 years of development and testing, the first [SynMed® ULTRA](#) was installed in a Central Fill facility.

In February 2018, [Absolute Pharmacy](#) in North Canton, OH became the first US site to take advantage of this unique high capacity automation. Here is what they have to say about their experience with the technology, and Synergy Medical as a partner: [SynMed® ULTRA at Absolute Pharmacy in Ohio](#).

Shortly thereafter the ULTRA was installed at [CareKinesis](#) in Moorestown, NJ, where SynMed® technology has been facilitating patient care for almost 8 years.

SynMed® ULTRA joins our standard robot, SynMed® XF, as well as SynMed® Assist.

[SynMed® Assist](#) can be used with our automation to ensure secure placement of exception drugs, or as a stand-alone solution to facilitate the efficient, accurate, and safe manual filling of 8 - 10 blister cards at a time.
